DRY RIVER RYE IPA INSTRUCTIONS

RECIPE INCLUDES:

- 1 Long Play IPA Brewing Extract (Yeast under lid. You won’t be using this.)
- 1 Packet Flaked Rye (4 oz)
- 1 Packet 2-Row Brewers Malt (4 oz)
- 1 Packet Carapils Malt (4 oz. You’ll only use 2 oz. for this recipe.)
- 3 Packet Zythos Hops (.5 oz each)
- Safale US-05 Dry Ale Yeast
- 4 Muslin Hop Sacks
- 1 Packet No-Rinse Cleanser

PLEASE NOTE: If you are not going to brew this recipe right away, we recommend that you refrigerate the packets of grains to preserve freshness.

YOU'LL PROVIDE:

- Thermometer for Steeping/Mashing - Range up to 175°F (found here)

Additional Information

OG: 1.066 (approx.) -- FG: 1.016 (approx.)
Suggested conditioning time is 1 to 3 weeks.
Flavor: Hoppy
ABV (alc/vol): 6.3
SRM (Color): 5
IBU (Bitterness): 92
**STEP 1: SANITIZING**

Follow the steps outlined in your Mr. Beer Kit Instructions. (You can find a copy of these instructions to download by visiting our help desk.)

**NOTE: BE SURE TO SANITIZE EVERYTHING THAT WILL COME INTO CONTACT WITH YOUR BEER.**

**STEP 2: BREWING**

Brewing beer is the process of combining a starch source (in this case, a malt brewing extract) with yeast. Once combined, the yeast eats the sugars in the malt, producing alcohol and carbon dioxide (CO2). This process is called fermentation.

1. Using a measuring cup, pour 6 cups of water into your clean 3-quart or larger pot (use enough water to cover the grains).
2. Mix the grains in a bowl and add them to a Muslin Hop Sack, and bring your water up to above 155 degrees F.
3. Add the grain sack to the hot water and steep for 30 minutes between 155-165 degrees. (You may add up to another 2 cups of hot water to make sure that your grains are fully submerged.)
4. Carefully lift the grain sack out of the pot and place into a strainer/colander. Rinse the sack over the pot with 1 cup of hot water. Let drain. Do NOT squeeze the grain bag. Discard grain bag.
5. Remove the yeast packet from under the lid of the Brewing Extract (you won’t be using this), then place the unopened can in hot tap water.
6. Place 1 packet of Zythos pellet hops (.5 oz) into a hop sack tying it closed, then trim away excess material.
7. Bring grain water to a low rolling boil, add in hop sack, let boil for 15 minutes and then remove from heat.
8. While this is boiling, place the contents of another packet of Zythos hops into a hop sack and trim away excess material.
9. After the 15 minute boil of the first hop addition has passed, add the 2nd hop sack and simmer for another 5 minutes (do not remove first hop sack). While this is simmering, place the contents of the last packet of Zythos hops into a hop sack and trim away excess material.
10. After the 5 minute boil of the 2nd hop addition has passed, remove the pot from heat and add the final hop sack to the wort (do not remove previous hop sacks).
11. Open the can of Long Play IPA brewing extract, and pour the contents into the hot mixture. Stir until thoroughly mixed. This mixture of unfermented beer is called “wort”.

12. Fill keg with cold tap water to the #1 mark on the back.

13. Pour the wort, including the hop sacks, into the keg, and then bring the volume of the keg to the #2 mark by adding more cold water. You’ll leave the hop sacks in the wort for the duration of fermentation. Stir vigorously with the spoon or whisk.

15. Put your keg in a location with a consistent temperature between 65° and 76° F (20°-25° C) and out of direct sunlight. Ferment for 14-21 days.

16. After approximately 24 hours, you will be able to see the fermentation process happening by shining a flashlight into the keg. You'll see the yeast in action in the wort. The liquid will be opaque and milky, you will see bubbles rising in the liquid, and there will be bubbles on the surface.

Your fermentation will usually reach its peak in 2 to 5 days (this is also known as “high krausen”). You may see a layer of foam on top of the wort, and sediment will accumulate at the bottom of the fermenter. This is totally normal. Complete fermentation will take approximately 2 weeks. After high krausen the foam and activity will subside and your batch will appear to be dormant. Your beer is still fermenting. The yeast is still at work slowly finishing the fermentation process.

**STEP 3: BOTTLING AND CARBONATING**

Follow the steps outlined in your Mr. Beer Kit Instructions. (You can find a copy of these instructions to download by visiting our help desk.)
